

**Smilart** is the global leader in biometric facial recognition technology that produces and sells its very own software platform.

The **Smilart platform** is a technology stack which uses facial recognition algorithms to reliably identify people and objects in cooperative and uncooperative real-time scenarios for limitless application of detection, identification or verification.

PCP Solutions, together with Basler and Smilart, have combined their leadership and expertise to bring you a first-of-its kind, flexible, integrated, and compact product that can recognize people in an instant.
